

Teams Enablement Services for Healthcare

Dapasoft's Teams Enablement Solution provides organizations with a clear, defined path for a successful Microsoft Teams rollout. This multiple phased approach allows organizations to define where Teams will fit in their organization's existing business processes, ensure technical platform readiness and user readiness.

O365 Platform Readiness

Ensure technical platform readiness before deployment with agreed upon governance, security, compliance, communication, migration and overall Office 365 deployment status.

- Microsoft O365 licensing
- Azure AD on-boarding and synchronization
- Multifactor authentication
- Collaboration/Sharing controls
- Exchange Online implementation and migration
- SharePoint Online Implementation
- Advanced Threat Protection
- Data Loss Prevention / Data Retention
- Cloud App Security
- Privileged Access Management

Teams Readiness & Rollout

Ensure appropriate readiness and rollout of Teams for identified users/use cases. This includes platform configuration, client rollout and enabling voice plans etc.

- Teams enablement with Chats, teams, channels and apps
- Meetings and conferencing setup
- Desktop and Mobile software client roll-out
- Custom messaging policies
- Cloud Voice (dial plans, PSTN connectivity, call queues, etc.)
- Mobile device management/Skype for Business co-existence

Crisis Management App

An easy to deploy application - built using Power Apps, Power Automate, Teams, and SharePoint - to help organizations share information and collaborate during crisis.

- Employees can report their work status (e.g., working from home) and make requests.
- Admins can use the app to push news, updates, and content specific to their organization, and can provide emergency contacts specific to different locations.
- Add RSS feeds of up-to-date information from reputable sources such as WHO, MHO, etc.
